The main aim of Dimensions is to provide educators with quality professional learning materials, along with related classroom resources.

The professional learning materials will be available as short modules that deal with specific topics, appropriately tagged for easy searching.

It is envisaged that Dimensions will utilise appropriate online tools and technologies to allow users to collate their own suite of resources, track their professional learning, and connect with other educators via online communities.

The portal is currently under development and will be available for public use in 2017. Initially, materials for Dimensions are being developed by five university projects, funded under the Australian Mathematics and Science Partnership Program (AMSPP), in conjunction with AAMT. Access to these materials will be free.

It is envisaged that the range of quality-assured professional learning materials available for teachers via the portal will grow over time.

Dimensions is an online portal for teachers (F–12), mathematics leaders, and others, being developed by the Australian Association of Mathematics Teachers (AAMT) Inc.

For more information, please contact the AAMT office.
